

LEARNFLEX™ ENTERPRISE LEARNING PORTALS

LearnFlex™
▷ is the perfect fit for Learning Management

OVERVIEW

Realize the freedom of enterprise-wide communication with Microsoft's Windows SharePoint® Portal. SharePoint® allows for seamless integration with the latest version of LearnFlex™ Learning Management System, creating the optimal learning environment for your organization.

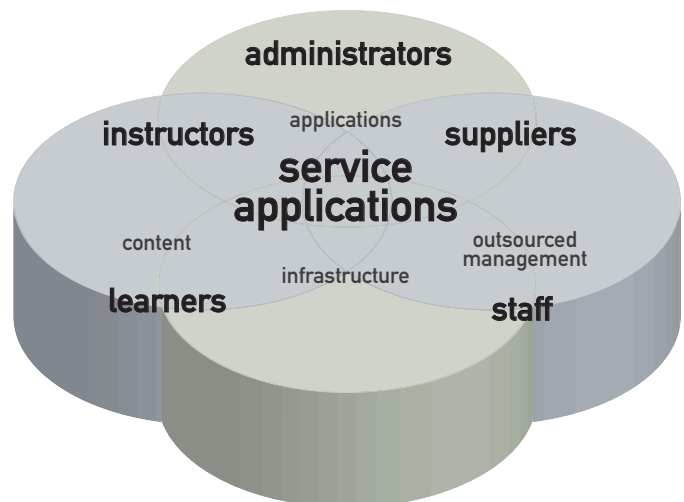

The SharePoint® environment enables organizations to develop an intelligent portal that connects users, teams and knowledge. Users can take advantage of relevant information drawn from multiple business processes to help them work more efficiently.

BENEFITS

- Enterprise business solution which integrates information from various systems into one solution.
- Flexible deployment options and management tools.
- End-to-end collaboration of data, people, teams, and information.
- Enables teams to publish information on team sites and for the entire organization.
- Find relevant information easily via customized and personalized portal content and layout.
- Target information, programs, and updates to audiences based on their organizational role, team membership, interest, or security group.
- Complete environment where all courses, learning resources, library resources, support information, and FAQs can be linked into one solution.
- Simplified updates, minimal maintenance, and flawless integration of internal and external systems.

FEATURES

- Allows system administrators to assign content ownership of portal modules and tabs to community stakeholders through delegated content management.
- Multiple means of delivering content and facilitating community-building via unlimited, customizable portal modules, portal tabs and education areas.
- Deliver personalized content and services to end-users through customizable roles and security.
- Easily manage portal environment and system growth through centralized control of web services and robust administration features.

▷ LEARNFLEX™ ENTERPRISE LEARNING PORTALS

LearnFlex™ has the following three proprietary web services that can be used with SharePoint®.

- 1) Single Signon Web Service provides an interface for clients to request Single Sign on as well as deep link URLs in order to effectively authenticate and advance to a specified location within the LearnFlex™ system.
- 2) The LearnFlex™ User Web Service provides an interface for clients to perform user creation / updates. Clients can use this service to perform user modifications from external systems.
- 3) The LearnFlex™ Course Search Web Service provides an interface for clients to perform course search queries against the LearnFlex™ course catalogue. Clients can use this service to perform queries from external systems and surface the results in the external system.

Operitel has also built four additional web parts which are used with Sharepoint® to create a learning portal:

- 1) Embedded Video Web Part which allows video files to be embedded into a Sharepoint® page. This is very useful for best practice learning sites.
- 2) What's New Web Part allows for the administrator to identify new items that have been added to the learning portal.
- 3) Rotating Video Web Part allow for different videos to be displayed each time a user access that specific area of the Sharepoint® site.
- 4) Tip / Fact of the Day displays a different fact or tip of the day from the database.

“Of the 40 companies in our latest **LMS Industry Study**, only one, **Operitel**, openly markets its abilities to connect **SharePoint®** and the **LMS**. **Operitel** is able to leverage its separate experience as a hosting provider and implementer for **SharePoint®** in this regard. Other providers tell us they have accomplished some type of custom integration, but most often just a simple single-sign-on connection allowing the user to seamlessly “click-through” to the **LMS**.”

David Mallon, Analyst, Bersin and Associates
